Are you unhappy with your smile? Would you like straighter teeth but are concerned about how you will look with braces?

## CLEARSMILE ALIGNER

- A series of clear removable positioners designed to straighten your front 6-8 teeth.
- It is practically invisible being transparent and smooth without brackets or metal components.
- It can straighten teeth that are crowded, rotated, tilted forward or backwards.
- Depending on the position of your natural teeth Clearsmile may take more or less time to have the desired effect, usually treatment is complete in 3-12 months.
- These positioners are replaced weekly.

## INMAN ALIGNER

- A simple orthodontic appliance that is used to straighten crooked or misaligned front 6 teeth.
- Achieves rapid tooth straightening in one removable brace, so there is no need to change aligners every week.
- It is recommended that you wear the appliance for a minimum of 16 to 20 hours a day, the longer you wear the Aligner the quicker the results.
- The duration of treatment is typically 8-16 weeks.

## 6 MONTH SMILES

- A highly aesthetic fixed brace with transparent brackets and tooth coloured wires.
- Achieves a wide range of tooth movement and alignment.
- Typically takes 6 months for treatment but may range from 3-9 months.

## REMOVABLE APPLIANCES

- For minimal cases please contact the surgery today for an appointment to discuss alternative removable appliances.
